Art Unit: 1651

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 3-36, drawn to method for producing soy protein , classified in class 424, subclass 725.
- II. Claims 37-80, drawn to a method for producing a vegetable protein having low RNA, phytic acid and phytates, classified in class 435, subclass 404.

1. The inventions are distinct, each from the other because of the following reasons:

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. The groups I and II are related as methods, however, each require different process steps for carrying their methods and furthermore the method of Group II requires characteristics of low RNA and phytic acid and phytates whereas the method of Group I does not. The restriction is deemed proper for these reasons and because they are classified differently. The inventions are distinct one from the other and thus, are deemed restrictable.

2. A telephone call was made to R. Taylor on September 25, 2002, to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
